LEGEND

☒ Ink — text & headings ☐ Canvas — surface ☒ Accent — emphasis ☒ Highlight — rules

This is final copy, not a draft. Every string below is labelled so it can be wired without guessing. Sixteen sections, in the ratified order — nothing added, nothing dropped, nothing reordered. Language: English, with `zerado` and `sinopse` kept in Portuguese and each explained once, in a clause, the first time a reader meets it (Q5-b).

Casing, per `naming.md` : the product is always `Zerado` ; the command/domain is always lowercase `zerado` ; the in-app status, in prose, is lowercase and *italicised on its first appearance on the page* — that first appearance is in §05, below — and plain lowercase after.

No dates, no version numbers, no download links, no prices, no user counts, no testimonials appear anywhere in this document. The roadmap (§12) marks every phase **Planned**. Nothing is downloadable yet — the CTA is a waitlist, everywhere it appears.

	Page Copy				

Headline:

Pick a mood. Get a game. Play it tonight.

Subhead:

Zerado reads your entire library – Steam first, then PlayStation, GOG, EA, and the cartridges still on your shelf – and answers the only question that actually matters at 11pm: what do I play? It runs in your terminal, works with the network off, and everything it knows lives in one file on your machine.

CTA primary: Join the waitlist → <mailto:alex@flowforgesoft.com?subject=Zerado-WaitList>

CTA secondary: View on GitHub → <https://github.com/JustCode-CruzAlex/Zerado>

Microcopy, under the CTA pair:

*Opens your mail client, addressed and subject-lined already.
No form, no account.*

Image slot — full width, below the fold line: The program's library view, running. **Alt text:** "An illustration of Zerado's terminal library view. This is a mockup of the planned interface, not a screenshot — the program isn't runnable by visitors yet."

S02

02 · maker-line

Body — one line, no heading needed:

Zerado is the second product from FlowForgeSoft, the company behind FlowForge.

STATUS

● IN REVIEW

Heading: Sorted by mood, not genre

Intro line:

Genre tells you what a game is. Mood tells you what tonight is for. Zerado sorts by the second one.

Card 1

- Title: Mindless grind
- Body: Repetitive, low-stakes, doesn't ask for your attention. For the night you want to zone out, not think.

Card 2

- Title: Story rich, kind of sad
- Body: Something to feel, not just clear. For the night you want to sit with a story, not race through one.

Card 3

- Title: Quick fifteen minutes
- Body: Starts fast, ends clean, fits in the window you actually have before bed.

Card 4

- Title: Tactical, full focus
- Body: Wants your whole attention and rewards it. For the night you have the attention to spend.

Image slot: The mood picker on screen. **Alt text:** "Mockup of Zerado's mood picker in the terminal, showing mood categories — including 'Mindless grind' and 'Quick fifteen minutes' — next to the games that match each one."

Heading: Where each game stands

Intro line:

Four states, one for every game in the library.

State 1

- Glyph + label:  NOT STARTED
- Line: In the library. Untouched.

State 2

- Glyph + label:  IN PROGRESS
- Line: Currently being played.

State 3 — the payoff line

- Glyph + label:  ZERADO
- Line: Finished. **Zerado** is Portuguese for beaten — cleared, 100%'d — from the arcade counter that ran past its last digit and rolled back to zero. The product is called **Zerado**. Marking a game *zerado*, in **Zerado**, is the whole point of it.

State 4

- Glyph + label:  ABANDONED
- Line: Started, set down, not coming back to it.

Heading: One collection, everything you own

Connected stores:

Steam syncs today – your library, playtime and status, kept current on its own. PlayStation, GOG and EA are planned next: connect an account, see it in the same list.

The physical shelf:

Add the discs and cartridges next to your desk by hand – title, platform, done. Each one gets the same mood tag and status as anything synced automatically, and, once cover art and sinopse – Portuguese for synopsis, a short plot summary – are wired in, the same page as everything else. A physical copy isn't a second-class row in the list.

Image slot: Cover-art grid, mixed synced and hand-added titles, one marked Physical. **Alt text:** "Mockup of a cover-art grid showing synced and manually-added games side by side, with one cover labelled 'Physical' to show a hand-entered disc or cartridge sitting in the same collection as everything else."

S07

07 • price-intelligence

Heading: When to buy, not just what to buy

Intro line:

*Say what you can spend. **Zerado** checks today's price against the lowest that game has ever gone, and tells you plainly whether today is a good day to buy.*

Worked example — labelled as an example, not live data:

*A game already in your library is \$15 today — inside budget. Its all-time low is \$8, three months ago. The verdict: **"\$15, and in budget. It's been \$8. Maybe wait."***

Caption under the example:

*Illustrative numbers. Price data comes from IsThereAnyDeal once **Zerado** is connected — nothing above is a live quote.*

Image slot: A single price card with its history. **Alt text:** "Illustration of a price card: current price \$15, all-time low \$8 reached three months ago, verdict 'maybe wait.' Example numbers for illustration, not a live quote."

S08

Ø8 · yours-and-offline

Heading: It's yours, and it's offline

Three points:

One file on your machine. Your whole library lives in a single SQLite file you can back up, move, or delete – nobody else holds a copy.

No account to use it. Nothing to sign up for, nothing to log into, before it works.

*Runs with the network off. Once your library is synced, **Zerado** doesn't need the internet to answer what to play tonight.*

S09

09 · terminal-first

Heading: Built for the terminal, on purpose

Body:

It's a text program. It starts instantly, holds your whole library in memory, and fetches from every connected source at once instead of making you wait on each one in turn. No mouse required, no page to load, no telemetry running in the background.

Image slot: A second screenshot — one game's detail page. **Alt text:** "Mockup of a game's detail page in the terminal, showing its status, mood tags and price history in one screen."

S11

11 • community

Heading: The community layer — Phase 4, not built yet

Body:

Comments, reviews and public profiles. These run on servers, and servers cost money — so this part will need a premium account or a donation once it exists. Nothing is decided about price, tiers, or a date, and nothing on this page is asking for either. This section shows what's planned, stamped for what it is: a later phase.

Image slot: Example community screens, watermarked as a later phase. **Alt**

text: "Example mockup of the community layer — a comment thread, a review, and a public profile — watermarked 'Phase 4, not available yet.'"

Heading: Roadmap

Intro line:

Four phases, in order. Every one of them is planned – none is marked done, because that would be the one dishonest line on this page.

Phase 1

- Number/name: Phase 1 — CLI/TUI MVP
- Line: Your library, your statuses, stored locally.
- Status: Planned

Phase 2

- Number/name: Phase 2 — Enrichment
- Line: Covers, synopsis, prices, moods.
- Status: Planned

Phase 3

- Number/name: Phase 3 — Recommendations & Budget
- Line: What to buy, and whether to wait.
- Status: Planned

Phase 4

- Number/name: Phase 4 — Social & Mobile
- Line: Sync, community, the phone apps.
- Status: Planned

(No dates render on any phase — see decisions.md, "still open" item 2: undated, ordered phases with a status marker only, until told otherwise.)

§13

13 · after-phase-4

Heading: After Phase 4 — ideas, not promises

Body:

A few directions under discussion, none scheduled and none committed: more storefronts beyond the four above, deeper backlog analytics, and mood tagging that improves the more you use it. Nothing here has a date, and nothing here is a promise.

STATUS

● IN REVIEW

Heading: Questions**Q:** Is it free?

*Yes. **Zerado** itself costs nothing. The only money in the picture, both disclosed below: an affiliate commission when a price link leads to a purchase, and, once the Phase 4 community layer exists, an optional premium account or donation to help cover its server cost.*

Q: Do I need anything from Steam? Does my profile have to be public?

*A free Steam API key, which takes a minute to generate. And yes – Steam only returns a library if the profile is public, or if the key belongs to that same account. If a profile is private, Steam won't share the list; that's a Steam setting, not something **Zerado** can work around.*

Q: Does my data leave my machine?

*Your library lives in one SQLite file on your machine, and nothing needs an account to use it. The only network traffic is **Zerado** reaching out to the services you've connected – Steam, price data – using your own keys. Nothing about your library is sent to a **Zerado** -run server, because there isn't one.*

Q: Which stores work today, and which are later?

Steam is built and works. PlayStation, GOG and EA are planned, not yet built. Physical discs and cartridges are entered by hand from day one – no store integration required for those.

Q: Can I run my own server?

*There's no server to run. **Zerado** is local-first: it reads your library and stores the result in one file on your own machine. The one thing that will eventually run centrally is the Phase 4 community layer – comments, reviews, public profiles – because sharing a comment with someone else requires a server somewhere.*

Q: How is this paid for?

Two ways, both disclosed and neither a fee to use *Zerado* itself: an affiliate commission when a price link you follow leads to a purchase, and, starting in Phase 4, an optional premium account or donation toward the cost of running the community servers.
