

Zerado – SEO & Metadata

Title tag

Zerado – terminal game library tracker, sorted by mood

54 characters. Per `naming.md` 's consequence for this exact name: never a bare "Zerado" in a title — always paired with a qualifier, because "zerado" alone is a common Portuguese word (see "Ranking note," below) and carries no meaning to a search engine on its own.

Meta description

Zerado sorts your Steam library by mood and tracks price against the all-time low.

Terminal-first, offline, one SQLite file you own. Join the waitlist.

151 characters. Contains the primary keyword, states the two concrete mechanisms (mood sort, price-vs-low), and ends on the one real CTA the page has — there is nothing else to offer a pre-launch product.

Canonical URL

<https://zerado.app/>

Open Graph

Field	Value
<code>og:type</code>	<code>website</code>
<code>og:site_name</code>	Zerado
<code>og:title</code>	Zerado — terminal game library tracker, sorted by mood
<code>og:description</code>	Zerado sorts your Steam library by mood and tracks price against the all-time low. Terminal-first, offline, one SQLite file you own.
<code>og:url</code>	<code>https://zerado.app/</code>
<code>og:image</code>	<i>(see "OG image concept," below — no file exists yet)</i>
<code>og:locale</code>	<code>en_US</code>

`og:description` is intentionally shorter than the meta description — it drops the CTA sentence, since a social-share card and a search result earn a click differently; the card's job is to describe, the search result's job is to invite the click.

Twitter card

Field	Value
<code>twitter:card</code>	<code>summary_large_image</code>
<code>twitter:title</code>	Zerado — terminal game library tracker
<code>twitter:description</code>	Sorts your Steam library by mood. Tracks price against the all-time low. Terminal-first, offline, one file you own.
<code>twitter:image</code>	<i>(same asset as <code>og:image</code> — see below)</i>

OG image concept – one line, for the build phase to execute

A dark, amber-on-chassis card (§4/§6 of the brand manual) carrying the wordmark **ZERADO**, the tagline "Pick a mood. Get a game. Play it tonight.", and a single glyph-and-label state chip (● **ZERADO**, cyan) as the one accent of colour — no screenshot, since none exists yet, and no fabricated UI.

JSON-LD – **SoftwareApplication**

Every field below is either verifiably true today or a plain description of the product. **No aggregateRating, no offers/price, no applicationSubCategory download counts, no softwareVersion** — none of those exist yet, and a schema block is exactly the kind of thing a crawler treats as a hard factual claim, not marketing copy.

```
{
  "@context": "https://schema.org",
  "@type": "SoftwareApplication",
  "name": "Zerado",
  "url": "https://zerado.app/",
  "description": "Zerado is a terminal-first game-library tracker. It reads your game collection, sorts it by mood instead of genre, tracks price against the all-time low, and answers what to play tonight.",
  "applicationCategory": "UtilitiesApplication",
  "author": {
    "@type": "Organization",
    "name": "FlowForgeSoft"
  },
  "sameAs": [
    "https://github.com/JustCode-CruzAlex/Zerado"
  ]
}
```

Deliberately omitted, and why:

- **operatingSystem** — not yet confirmed publicly for this build; stating one would be a guess dressed as a fact.
- **offers** / **price** — nothing is for sale.
- **aggregateRating** / **review** — no reviews exist. Fabricating one is the single fastest way to lose a rich-result eligibility check, and it's also just untrue.
- **softwareVersion** / **datePublished** — pre-launch; there is no version to name.

Keyword set

Primary:

- terminal game library tracker
- game backlog tracker terminal

Secondary:

- Steam library tracker TUI
- game mood tracker
- game tracker offline
- game price tracker all-time low

Long-tail, compound (the ones with the least competition):

- zerado game tracker
- zerado terminal
- zerado backlog

Ranking note — read before setting expectations

"Zerado" alone is not a winnable search term, and this was accepted knowingly at naming (see `naming.md`, "The risks we accepted," §3). It is common, everyday Brazilian Portuguese — "zerado" also means a bank balance at zero, a reset counter, a football score. Ranking for the bare word in Portuguese-

speaking markets is not realistic, and paid ranking for it would mostly buy traffic that has nothing to do with the product.

What *is* winnable: the domain `zerado.app` is exact-match and unambiguous, and the compound long-tail queries above have effectively no existing competition. Per `naming.md`’s consequence for the site, every title and every piece of metadata pairs the bare name with a qualifier — “terminal game library” — for this exact reason. The launch channel is direct and community-led (a public GitHub repo, a small terminal-tool audience), not organic search — SEO here is a long-tail hedge, not the primary acquisition plan.
